EDUCATION

Northeastern University, Boston *Sep 2024 - Dec 2026*

Master's in Data Science GPA: 4.0/4.0

- **Related Coursework:** Supervised Machine Learning and Learning Theory, Large Language Models, NLP, Data Mining Tools.

Anurag University, Hyderabad *Oct 2020 - Jun 2024*

Computer Science and Engineering with honors in Data Science CGPA:8.14/10

- **Related Coursework:** Design and Analysis of Algorithms, Natural Language Processing, Machine Learning, Cloud Computing.

SKILLS

Project Management: Agile Methodology, Sprint Planning, Resource Allocation, Milestone Tracking, Problem Solving

Cloud AI: AWS Bedrock, SageMaker, S3 (Data Storage, Vector datasets), IAM (access control), Lamda.
Software Development: Java, Spring Boot, SQL, SQL Scripting RabbitMQ/MQTT, Python, R, MATLAB, Java, JavaScript, C, C++
Data Science & Visualization: Pandas, NumPy, Matplotlib, Tableau, Power BI, Excel dashboards, PySpark, NLTK, SciPy, spaCy, Statsmodels, TFLite, MapReduce, Apache Spark, Excel
Natural Language Processing: TF-IDF, Word2Vec, BERT, RoBERTa, Sentiment Analysis, LLMs, Tokenization, Text Classification
ML and AI: Transformers, LLMs, PyTorch, TensorFlow, Keras, Scikit-learn, RAG, OpenCV, HuggingFace, LSTM, GRU
Version Control and DevOps: Git, GitHub, Bitbucket, GitLab

EXPERIENCE

One Community Inc | *Data Scientist* *Remote | USA*
Jan 2026 – May 2026

- Led a cross-functional analytics team, coordinating data analysis, reporting, and delivery of insights to support product and operational decision-making.
- Built Python-based data visualizations and dashboards for the website, translating complex datasets into stakeholder-ready insights.
- Authored analytical reports and data-backed summaries to communicate trends, performance metrics, and impact of platform changes to technical and non-technical audiences.

Citridot | *Junior Data Analyst* Hyderabad
Jan 2023 – Jun 2023

- Automated end-to-end data processing pipelines in Python + SQL, cutting manual reporting time by 30 hours/month and improving delivery speed by 45%.
- Optimized algorithmic data pipelines in Python/SQL, focusing on execution speed and memory usage.

NoQs Digital Pvt. Ltd. | *Data Analyst* Hyderabad
Aug 2023- Jan 2024

- Implemented anomaly-detection models to flag customer-service delays, cutting issue-resolution time by **40%**.
- **Dashboard & Database Management:** Designed and implemented dashboards and backend services with SQL and Python to support real-time business intelligence.
- Developed **LLM-based summarization tools** (OpenAI API + Bedrock) for support tickets, improving manager review efficiency by **55%**.

PROJECTS

Semantic Resume Matching Using LLM, FAISS, And RAG: *Feb 2025 - Mar 2025*

- Designed an **AI-driven career matching assistant** using *Sentence Transformers*, *FAISS*, and **Retrieval-Augmented Generation (RAG)** to improve job-seeker access to opportunities.
- Generated **LLM-based explanations** using **LLaMA** and **Mistral models**, ensuring transparent and interpretable hiring recommendations.

NBA Player Performance Prediction: *Sep 2025 - Dec 2025*

- Built end-to-end machine learning pipelines in Python using regression and classification models with advanced feature engineering to predict NBA player performance metrics.
- Improved prediction accuracy by ~20% over baseline models through hyperparameter tuning, cross-validation, and model evaluation, with insights visualized using Matplotlib and Pandas.

Toxic Behavior Detection And Prediction In Online Games: *Oct 2024 - Dec 2024*

- Optimized model performance with **Hugging Face Transformers**, **PyTorch**, and **T5Tokenizer**, utilizing **early stopping** and **hyperparameter tuning** to improve computational efficiency while maintaining **predictive accuracy**.
- Applied **ethical-AI filters** (PII masking + bias evaluation) to support safer online environments and reduce false reports by 18%.
