Manish Kanuri

Boston, MA | +1 (857) - 452 - 6325 | Kanuri.m@northeastern.edu| LinkedIn| GitHub| Portfolio

EDUCATION

Northeastern University **Sep 2024 - Dec 2026**

Master of Science in Data Science **GPA: 3.9/4.0**

Coursework - Supervised Machine Learning and Learning Theory, Unsupervised Machine Learning, Data Management and Processing, Natural Language Processing, Algorithms, Data Mining Techniques, and Large Language Models.

Anurag University **Aug 2020 - June 2024**

Bachelor of Engineering in Computer Science and Engineering with honors in Data Science **GPA: 8.14/10**

Coursework – Data Structures, Formal Languages and Automata theory, Artificial Intelligence, Cloud Computing, Machine Learning.

TECHNICAL SKILLS

- **Programming & Databases:** Python, SQL, R, Scala, Java, PySpark, MongoDB, Snowflake, PostgreSQL, MySQL, Cassandra
- **Data Engineering & ETL:** Apache Spark, Kafka, Airflow, Hadoop, Hive, Databricks, DataEDO, DBT, Apache Beam
- **Data Analysis & Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Plotly, Tableau, Power BI, Looker, D3.js, Excel, Jupyter
- **Cloud & DevOps:** AWS (S3, Redshift, Glue, Lambda, EMR, Kinesis), Azure (Synapse, Data Factory, Databricks), GCP (BigQuery, Dataflow), Docker, Kubernetes, Terraform, Git
- **Big Data & Streaming:** Spark Streaming, Apache Flink, Delta Lake, Parquet, Avro, ORC, Apache Storm
- **Machine Learning & AI:** Scikit-learn, TensorFlow, PyTorch, XGBoost, MLflow, Feature Engineering, Model Deployment, A/B Testing
- **Data Architecture & Governance:** Data Modeling, Data Warehousing, Data Lakes, ETL/ELT, Data Quality, GDPR, Data Cataloging

PROFESSIONAL EXPERIENCE

Data Scientist Co-op, One Community Inc, Remote, United States **Jan 2026 - May 2026**

- Led a cross-functional analytics team, streamlining data analysis and reporting workflows to enable **30% faster decision-making** and improve the delivery of actionable insights across product and operations.
- Developed scalable **data visualization pipelines and dashboards in Python** (Pandas, Seaborn, Plotly), transforming large, complex datasets into actionable insights and reducing analysis time by **30%.**
- Generated analytical reports using Python **(Pandas, Matplotlib) and SQL, translating complex metrics** into actionable insights and reducing reporting time by 30%.

Data Analyst, NoQs Digital Pvt. Ltd, Hyderabad, India **Aug 2023 - Jan 2024**

- Dashboard & Database Management: Designed and implemented dashboards and backend services with SQL and Python to support real-time business intelligence.
- Developed **LLM-based summarization tools (OpenAI API + Bedrock)** for support tickets, improving manager review efficiency by 55%.

Junior Data Analyst, Citridot, Hyderabad, India **Jan 2023 - June 2023**

- Automated end-to-end data processing pipelines in Python + SQL, cutting manual reporting time by 30 hours/month and improving delivery speed by 45%.
- Designed end-to-end predictive modeling and **LLM**-based solutions using **Python (Scikit-learn, Transformers)**, improving accuracy and automation efficiency by 20%.

ACADEMIC PROJECTS

Semantic Resume Matching System

- Built a **scalable resume–job matching system** with **Python, FAISS, and REST APIs**, enabling fast semantic search across thousands of resumes.
- Implemented **embedding-based ranking and explainable results**, improving match relevance by **40%** while maintaining low-latency responses for end users.
- Deployed as a **cloud-native** service on **AWS**, with logging, monitoring, and **CI/CD pipelines** for reliable production use.

Asteroid Hazard Predictor & Space Intelligence Platform

- Built an end-to-end ML pipeline with **Gradient Boosting + SMOTE** to classify near-Earth asteroids as hazardous or safe using live **NASA JPL data.**
- Integrated NASA **NeoWs, JPL Sentry, and CAD APIs** to surface real-time close-approach distances, impact probabilities, and orbital parameters.
- Developed an interactive **3D space tracker** in **Three.js with live CelesTrak satellite propagation** and 1,500+ real asteroid positions, deployed on **Streamlit Cloud.**

Toxic Behavior Detection And Prediction In Online Games

- Engineered a **scalable real-time chat moderation pipeline** using **Python, AWS S3, and PyTorch**, integrating ML for toxicity detection.
- Optimized **inference and batch processing**, reducing latency and improving moderation efficiency by **35%.**
- Implemented **logging, monitoring,** and **automated deployment** to ensure system reliability under high-traffic conditions.
